EXPERIENCE

Associate Software Engineer Synacy	<i>September 2025 - March 2026</i> <i>Cebu City, Philippines</i>
Migrated the email-sender service from Java 11 to Java 21 and Spring Boot 2 to 3, eliminating deprecated APIs and improving maintainability, performance, and compatibility, contributed to backend development by implementing and enhancing REST APIs, including invoice snapshot retrieval with hourly, daily, and weekly timeframes and cost comparison functionality, implemented database schema enhancements to support new application features.	
Software Engineer trainee Synacy	<i>July 2025 - August 2025</i> <i>Cebu City, Philippines</i>
Completed intensive training in Java, Spring Boot, Angular, and PostgreSQL as part of the Synacy Graduate Program, applying clean code principles, software engineering best practices, and collaborative development workflows, developed a Leave Management System by implementing frontend, backend, and database components as part of hands-on software engineering training.	
Web Developer Intern Sultan Kudarat State University	<i>June 2023- August 2023</i> <i>Isulan, Philippines</i>
Maintained the CHED Region XII Portal using the Codelgniter framework, contributed to the delivery of web-based services for the institution, refactored existing modules and resolved software defects to improve code readability, maintainability, system stability, and user experience.	

PROJECTS

Unified Digital Citizen Platform Cross-Platform Citizen Services Application	<i>Lead Full-Stack Mobile Developer</i> <i>Web Application</i>
Built a cross-platform mobile application using Angular Ionic, delivering seamless access to digital citizen services across multiple devices, Developed and integrated RESTful APIs using Spring Boot with PostgreSQL database schemas to provide secure, scalable, and reliable backend processing.	
Solar-Powered Automatic Fish Feeder IoT-Based Automated Feeding System	<i>Lead Software & Firmware Developer</i> <i>IoT</i>
Developed an IoT-based fish feeder system using ESP32 and ultrasonic sensors to automate feed dispensing and monitor feed levels in real time, built an Android application in Java and integrated Firebase Realtime Database to enable feed scheduling, quantity configuration, real-time synchronization, and notification delivery.	
Digital Signal Processing Trainer Interactive DPS Learning Platform	<i>Software Engineer</i> <i>Embedded System</i>
Developed an interactive DSP training platform on Raspberry Pi 4 using Python, PyQt5, NumPy, and Matplotlib with a touch-optimized interface for a 7-inch touchscreen display, implemented educational modules for Sampling & Aliasing, DFT/FFT, FIR/IIR Filter Design, Window Functions, and real-time signal visualization with audio demonstrations.	

SKILLS

Technical Skills
Version Control & DevOps: Docker, Linux, Git, GitHub, Firebase Programming Languages: Java, C++, Arduino, Python, Typescript Frameworks: Spring Boot, Angular, Ionic, Spock(Testing), Node.js, Codelgniter Databases: Postgres, Firebase, SQL, MySQL Project Management: Notion, Miro, Confluence

Education

Sultan Kudarat State University Bachelor of Science in Computer Engineering	<i>Isulan, Philippines</i> <i>August 2021 - June 2025</i>
<i>9th ICpEP Regional Convention Programming (Java) - 3rd placer</i> <i>February 2025</i> <i>FestBot (Robotics Competition) Sumobot Category - 2nd placer</i> <i>December 2024</i> <i>8th ICpEP Regional Convention Programming (Java) - 1st placer</i> <i>February 2024</i>
